

Synapse

DeskMakers
Be Enabled

Synapse is our most cost-effective benching system and features the same great engineering and design flexibility that you'll find in our TeamWorx and BenchWorx lines, but with a simpler kit of parts to fit tighter budgets.

STRUCTURE & POWER DISTRIBUTION

Synapse offers multiple solutions for bringing power and data to workstations

Steel beams running between the support legs give lateral strength to the bench while supporting the worksurfaces. Steel or laminate intermediate legs can be used to provide support for longer runs. The 8-wire, 4-circuit electrical can be placed in the wire basket under the worksurfaces.

Power can easily be brought to the worksurface allowing users the option to plug in above or below the worksurface.

The wire basket can be easily disconnected in order to place power cords, power bricks, or other peripherals.
