TeamWorx Electrical

TeamWorx offers two daisy-chaining power systems.

- V2 System - a 4 wire, 2 circuit system that provides a cost effective solution with power bases with data knockouts.
- S1 System - an 8 wire, 4 circuit system offers higher capacity, load and ground capabilities.

In a daisy-chaining system, power only needs to be provided to the first station in a cluster. Then that station "passes-on" the power to the next station, which then passes it on to the next station, and so-on. Daisy-chaining systems are also considered safer and may be required in certain installations due to safety regulations. All components are UL-Listed and made in the USA.

V2 System Daisy-Chain 4 Wire, 2 Circuit

Interconnecting cables connect V2 power bases to each other.

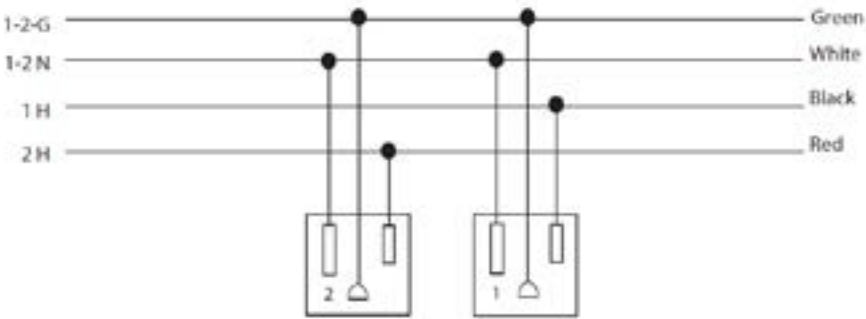

Hardwire or plug-in starter cables connect the V2 power bases to the building electrical and are rated for 20 amp.

Multiple V2 bases are available to provide options like USB charging, outlets at worksurface, data knockouts and outlets underneath the worksurface.

V2 grommets are placed directly above the power bases providing access to worksurface power outlets, data knockouts and USB. Available in black, white, silver and brushed stainless steel finishes.
