

Fabric Care and Maintenance Guide

To provide our customers with continuous design flexibility, DeskMakers proudly partners with Guilford of Maine, Momentum and Stinson Fabrics. Most fabrics from these select partners feature cleaning codes as reflected below:

Code S

- Only mild, pure water-free dry cleaning may be used for cleaning.
- Cleaning by a professional furniture service is recommended.

Code W-S

- Clean with water-based cleaners or water-free solvents.
- For water-based stains use water-based cleaners.
- For oil-based stains use solvent-based cleaners.
- Do not saturate or over wet.
- Vacuuming or light brushing is recommended to prevent dust and soil buildup.

Maintenance / General Recommendations

We recommend using a professional cleaning service. Maintenance is routine, on-going care which reduces the build-up of soil on the fabric's surface. Maintenance also includes promptly treating spots and stains. The longer a spot or stain remains on a textile, the more difficult it will be to remove. Vacuum frequently to avoid dust and soil build-up.

Always test any cleaning method or cleaning agent on an inconspicuous area on the furniture. Several light applications of a cleaning agent are less harmful than a single concentrated application. If stain persists, stain has probably set. Some agents and ballpoint inks can create a permanent stain.

Stain Treatment

For solid stains, allow the stain to dry. Use a soft bristle brush to remove loose particles. Vacuum thoroughly before cleaning with an agent. Avoid excess rubbing or scrubbing to prevent damage to the surface of the textile. Do not over saturate the textile or allow fluids to penetrate the surface. Remove fluids immediately by blotting with a clean, absorbent cloth. Allow fabric to dry thoroughly.

Please refer to individual textile manufacturer's website for additional information regarding the care and maintenance of specific fabrics.
